Competition Information - Goal

- Predict the news popularity

The screenshot shows the CNN website homepage. The navigation bar at the top includes the CNN logo and links to World, US Politics, Business, Health, Entertainment, Style, Travel, Sports, and Videos. There are also links for Edition, search, and user profile. Below the navigation bar, there are several news headlines and images. The main headline is 'Outrage erupts across US over Breonna Taylor's death' with a 'LIVE UPDATES' tag. Other headlines include 'Trump refuses to commit to a peaceful transition of power after Election Day', 'Giant robot, standing 60 feet high and weighing 24 tons, tested in Japan', 'S Korea official shot dead and burned by N Korean troops after crossing border: Seoul', and 'Kentucky AG explains why two officers weren't charged'. There are also smaller headlines about Dr. Birx, Resolution to honor Ginsburg, Westpac, DNA evidence, Eric Trump, and Rep. Ilhan Omar.

Outrage erupts across US over Breonna Taylor's death

Trump refuses to commit to a peaceful transition of power after Election Day

Ouya gaming console sells out on Amazon

By Todd Wasserman, Mashable
Updated 1415 GMT (2215 HKT) June 25, 2013

The Ouya sells for \$99 and all games will at least offer a free trial period or free-to-play version.

STORY HIGHLIGHTS

- Ouya gaming console sells out in hours on Amazon
- Android-based console sells for \$99

Well, that was quick. Just hours after going on sale in the U.S., Canada and the UK, the Ouya gaming console was already sold out Tuesday morning on Amazon, though other retailers still had it in stock.

Amazon, which was selling the device for \$99, told customers that the item was temporarily out of stock.

However, as of Tuesday morning, Target and Best Buy were still carrying Ouya. GameStop noted that the item was "currently unavailable."

Bag of Words

- A simple way of representing text data used in natural language processing and information retrieval.

Bag of words (BoW)

Very good drama although it appeared to have a few blank areas leaving the viewers to fill in the action for themselves. I can imagine life being this way for someone who can neither read nor write. This film simply smacked of the real world: the wife who is suddenly the sole supporter, the live-in relatives and their quarrels, the troubled child who gets knocked up and then, typically, drops out of school, a jackass husband who takes the nest egg and buys beer with it. 2 thumbs up... very very very good movie.

Convert Words to Vectors

- Bag of words (BOW)
- Term frequency-inverse document frequency (TF-IDF)
- Feature hashing

TF-IDF

- A numerical statistic that intended to reflect how important a word is to a document in a collection or corpus.
- The tf-idf value increases proportionally to the number of times a word appears in a document and is offset by the number of documents in the corpus that contain the word.

TF-IDF

- Term frequency (tf)

- It is a measure of how frequently a term appears in a document

- $tf_{i,j} = \frac{n_{i,j}}{\sum_k n_{k,j}} = \frac{\text{Number of times term } i \text{ appears in the document}}{\text{Total number of terms in the document}}$

- Inverse document frequency (idf)

- It is a measure of how important a term is

- $idf_i = \log\left(\frac{|D|}{|\{j: t_i \in d_j\}|}\right) = \log\left(\frac{\text{Total number of documents}}{\text{Number of documents with term } i \text{ in it}}\right)$

- $tf-idf_{i,j} = tf_{i,j} * idf_i$

Convert Words to Vectors

- Bag of words (BOW)
- Term frequency-inverse document frequency (TF-IDF)
- Feature hashing

Feature Hashing

- Reduce the dimension vocabulary space by hashing each vocabulary into a hash table with a fixed number of buckets.
- There are some cons, e.g. the information will be less than TF-IDF.
- However, you can do out-of-core learning when using hashing which means you only load part of the dataset at a time similar to the concept of batch.

Outline

- Competition information
- Method
- **Evaluation metric**
- Report & Show off
- Precautions

Evaluation Metric

- We will use **Area Under Curve (AUC)** as our metric in this competition.
- AUC is the area under the ROC curve.

Evaluation Metric

- Confusion matrix
 - A specific table layout that allows visualization of the performance of an algorithm.

	Actually Positive (1)	Actually Negative (0)
Predicted Positive (1)	True Positives (TPs)	False Positives (FPs)
Predicted Negative (0)	False Negatives (FNs)	True Negatives (TNs)

Evaluation Metric

- Receiver operating characteristic curve (ROC curve).
 - A graphical plot that illustrates the diagnostic ability of a binary classifier system as its discrimination threshold is varied.
 - False positive rate = $\frac{\text{False positive}}{\text{All negative samples}}$
 - True positive rate = $\frac{\text{Ture positive}}{\text{All positive samples}}$

Outline

- Competition information
- Method
- Evaluation metric
- **Report & Show off**
- Precautions

Report

- Each team has to hand in a report after the competition ends.
- The report should be in the form of a Jupyter Notebook.
- The filename should be DL_comp1_{team number}_report.ipynb
- Please submit your report via the eeclass system before 2022/10/23.

Report

- The report should include:
 - Student ID & name of each member
 - How did you preprocess the data
 - E.g. cleaning, feature engineering
 - How did you build the classifier
 - E.g. model, training algorithm, special techniques
 - Conclusion
 - E.g. interesting findings, pitfalls, takeaway lessons

Show off

- For the **top three groups** on the private leaderboard, a show off event will be held during the class on **2022/10/27**.
- For the top three groups, please prepare a brief presentation (about 3 to 5 minutes) to introduce your **feature design, model, methods tried and experiment results**.
- Please prepare slides. Don't present directly with your code.

Outline

- Competition information
- Method
- Evaluation metric
- Report & Show off
- **Precautions**

Precautions

- Timeline:
 - 2022/10/06 (Thur) - competition announced
 - 2022/10/20 (Thur) 23:59pm (UTC) - competition deadline
 - 2022/10/23 (Sun) 23:59pm - report deadline (to eeclab)
 - 2022/10/27 (Thur) - show off
- Scoring:
 - Private leaderboard - 80%
 - Report - 20%

Precautions

- Rules
 - What you **CAN** do
 - Use untaught APIs: you can use any machine learning tools you like as well as models/techniques that are not taught in the class.
 - What you **CAN'T** do
 - Create specific deterministic rules that make predictions.
 - Train models using representation learning based on neural networks.
 - Use datasets and references beyond those made available by the competition.
 - Abuse the competition infrastructure to gain an edge.
 - Copy code from other teams.
